

⇒ Start from the first element at index 0, find the smallest element in the rest of the array, which is 11, and swap (11) with current element (64).

⇒ Move to the next element at index 1 (25). Find the smallest in unsorted subarray and swap (12) with current element (25).

⇒ Move to element at index 2 (25). Find the minimum element from unsorted subarray & swap (22) with current element (25).

⇒ Move to element at index 3 (25). Find the minimum from unsorted subarray and swap (25) with current element (25).

→ Move to element at index 4 (64), find the minimum element (11) and swap (11) with current element (64).

→ We get the sorted array at the end.
